GameNet Project Report/User Manual

Required libraries:

Pygame, english_words, os, random, wx, sys

Manual:

GameNet is a digital arcade programme featuring simple games. In order to run the project, run the 'GameProject.py' file from the GameNet folder (it needs to be placed in the same directory as all the other files attached to the project). After the programme is run, you reach the welcome page. This is where you select if you want to play the single or multiplayer games. Afterwards, you select which game you want to play and then individual files of games are run. The instructions on how to play each game are provided in the game window before starting the game.

The games that we created are: Pong, Tetris, Memory Game, Tic-Tac-Toe, Hangman and Snake.

We also created a Rock Paper Scissors game, however, we had trouble implementing this into our main 'GameProject.py' file, so we are still submitting it separately and it is not part of our project. In order to run this game, you need to run "rps.py" file from the "rock paper scissors py files" folder.

Contributions:

Eman Ansari	Rock Paper Scissors
Mekhola Doha	Pong, Report
Zofia Dukala	Tetris, Memory game, Report
Asher Reeves	Tic-Tac-Toe, Hangman, overall layout
Emma Schonborn	Snake game
